CON101 Assignment#6
by Harshit Mawandia
2020CS10348

The 2 domains on which I would like to build a recommendation systems are, Jokes and Non sensical questions, and Political Agendas.

My 4 questions would be:

1. This sentence is false. Is this statement true or false?

2. What two things can you never eat for breakfast?

3. Who will be the next PM of India? (Given no data)

4. Are you a leftist or a rightist? and Why?

The experts who can answer the first 2 questions are people who are good at jokes like Sal Vulcano and Briann Quinn. The second two questions can be answered by people well versed in politics, like Kumar Vishwas and Manohar Parikar.

These questions require a certain imaginative thinking and also the ability to make choices which are not solely based upon logic, which are both very difficult to be attained by a machine.

Some other domains that I feel would be difficult for a machine to answer questions would be, book recommendations without any particular parameters, Or predicting ends of movies or novels, etc.
